Language Arts: MyView 2: “10 ways to reduce waste” p.531-534.

Maths: Page 282, Questions 1-48 and 52-66.

Jan 6, 2026

Science: Study this. Fossil fuels (coal, oil, gas) form from ancient plants and animals that died, got buried under mud and rock for millions of years, and were squeezed by heat and pressure deep underground, turning them into energy-rich fuels.

How it works, step-by-step:

1. Ancient Life: Millions of years ago, plants and tiny sea animals lived and died.
2. Buried Deep: Their remains sank to the bottom of swamps and oceans and were covered by layers of mud, sand, and other tiny rocks (sediments).
3. Heat & Pressure: More and more layers piled on top, squeezing the old plants and animals deeper and deeper.
4. Transformation: The immense heat and pressure from the Earth slowly changed these buried remains into coal, oil, and natural gas over millions of years.

Language Arts: Vocabulary Quiz this **Friday, January 9th.**

1. Emissions - substances released; anything given off by something else.
2. Excessive - to get or release a lot more than necessary.
3. Underlie - the foundation of something
4. Watt - a unit of measurement for electricity.
